

Hey, Buster, off the counter!

Are the pets on the furniture and kitchen counters? Is your dog snacking out of the kitty litter box? Unsightly baby gates around to keep the dog out of certain rooms or stairs?

Your pets easily learn where they can go—and not go.

The I-50™ is our most flexible solution to keep your pet safe inside since it can be used as a wired or wireless fence. You can wire a room or emit a wireless fence signal with this unit. The system is ideal for keeping your pet out of rooms with wide entrances and away from foyers and stairs.

Scoot!™ is an extra small transmitter and wire that can be discreetly hidden under the lip of a kitchen island, around the edge of a window, and in many other small areas. This indoor system works quietly, effectively and hidden from view making it seem like a wireless fence. Scoot! Is an ideal solution for studios and apartments, and also works great as a cat fencing solution!

Skedaddle is a wireless unit that adjusts up to 11' in diameter designed to protect a specific area of the house. Simply plug the power supply in and it's ready to use. Great for chairs, cribs, Christmas trees and litter boxes.

Prices start at
\$99
for indoor units
